

## Working Group

### IMPRESive

(International Movement for Preservation Service Development)

Against the background of [Article 34](#) (“Qualified validation services for qualified electronic signatures”) and [Article 40](#) (“Validation and preservation of qualified electronic seals”) of the eIDAS-Regulation (EU) No 910/2014 and the recently developed standards [ETSI TS 119 511](#) and [ETSI TS 119 512](#) as well as the seminal work performed in the EU-funded [FutureTrust](#) project, the go.eIDAS Working Group “IMPRESive” aims at initiating an “*International Movement for Preservation Service Development*” and welcomes all stakeholders, who are interested in developing, providing or using scalable preservation services for the trustworthy long-term preservation of advanced and qualified electronic signatures, seals, time-stamps, evidence records and/or general data.

The go.eIDAS Working Group invites all preservation-related stakeholders within the [eIDAS-Ecosystem](#), which in particular include [Time Stamping Services](#),

[Validation Services](#) and [Cloud Storage Services](#) as well as providers and users of related [Application Services](#).

The IMPRESive Working Group seeks to establish an international network of experts, which will work on the smooth integration of the different external trust services and storage services with the **IMPRESive Preservation Core**. This component has been developed within the EU-funded FutureTrust project and will serve as reference implementation for the integration of the different services and preservation schemes defined in Annex F of ETSI TS 119 512.

Join the **IMPRESive** team and preserve your long-term success!
